Current conditions

Page Summary

The `currentConditions` (/maps/documentation/air-quality/reference/rest/v1/currentConditions/lookup) endpoint provides current hourly air quality information. You can control which AQIs and pertinent information are returned (such as pollutants concentration level and health recommendations).

You can request current hourly air quality using the `currentConditions` (/maps/documentation/air-quality/reference/rest/v1/currentConditions/lookup) endpoint by sending an HTTP POST request to:

```
https://airquality.googleapis.com/v1/currentConditions:lookup?key=YOUR_API_KE
```

Include your request options in the JSON request body (/maps/documentation/air-quality/reference/rest/v1/currentConditions/lookup#request-body). The request body contains the location for which you would like to get the air quality current conditions and various options to control what air quality information to include in the response.

The APIs Explorer lets you make live requests so that you can get familiar with the API and the API options:

Try it! (#try_it)

Example of basic request

Basic request body

The following code shows how to construct a basic request body for a `currentConditions` (/maps/documentation/air-quality/reference/rest/v1/currentConditions/lookup) request. In this example, you set only the location.

```
$ curl -X POST -d '{
  "location": {
```

```
    "latitude": 37.419734,
    "longitude": -122.0827784
  }
}' \
-H 'Content-Type: application/json' \
'https://airquality.googleapis.com/v1/currentConditions:lookup?key=YOUR_API_K
```

Basic request response

The call above generates the following JSON response (/maps/documentation/air-quality/reference/rest/v1/currentConditions/lookup#response-body). For more details about the response data, see Response data (/maps/documentation/air-quality/response-data).

Note: By default, the response includes the Universal AQI with the basic AQI information. The AQI can be removed or replaced with a different AQI by setting the corresponding parameters.

```
{
  "dateTime": "2023-10-26T18:00:00Z",
  "regionCode": "us",
  "indexes": [
    {
      "code": "uaqi",
      "displayName": "Universal AQI",
      "aqi": 52,
      "aqiDisplay": "52",
      "color": {
        "red": 0.9490196,
        "green": 0.98039216,
        "blue": 0.019607844
      },
      "category": "Moderate air quality",
      "dominantPollutant": "no2"
    }
  ]
}
```

Note: If a `color` field value is `0`, that field is omitted from the response.

Example of request with multiple parameters

Multiple parameters request

The following code shows how to construct a request body for a **currentConditions** (/maps/documentation/air-quality/reference/rest/v1/currentConditions/lookup) request. In this example, in addition to the location, several extra computations and the response language are specified.

```
$ curl -X POST -d '{
  "universalAqi": true,
  "location": {
    "latitude": 37.419734,
    "longitude": -122.0827784
  },
  "extraComputations": [
    "HEALTH_RECOMMENDATIONS",
    "DOMINANT_POLLUTANT_CONCENTRATION",
    "POLLUTANT_CONCENTRATION",
    "LOCAL_AQI",
    "POLLUTANT_ADDITIONAL_INFO"
  ],
  "languageCode": "en"
}' \
-H 'Content-Type: application/json' \
'https://airquality.googleapis.com/v1/currentConditions:lookup?key=YOUR_API_K
```

Multiple parameters response

The call above generates the following JSON response (/maps/documentation/air-quality/reference/rest/v1/currentConditions/lookup#response-body). For more details about the response data, see Response data (/maps/documentation/air-quality/response-data).

```
{
    "dateTime": "2023-06-15T10:00:00Z",
    "regionCode": "us",
    "indexes": [
        {
            "code": "uaqi",
            "displayName": "Universal AQI",
```

```
            "aqi": 89,
            "aqiDisplay": "89",
            "color": {
                "red": 48,
                "green": 175,
                "blue": 55,
                "alpha": 255
            },
            "category": "Excellent air quality",
            "dominantPollutant": "o3"
        },
        {
            "code": "usa_epa",
            "displayName": "AQI (US)",
            "aqi": 41,
            "aqiDisplay": "41",
            "color": {

Try it!

The APIs Explorer lets you make sample requests so that you can get familiar with the API and the API options.

1. Select the API icon on the right side of the page.
2. Optionally edit the request parameters.
3. Select the **Execute** button. In the dialog, choose the account that you want to use to make the request.
4. In the APIs Explorer panel, select the fullscreen icon to expand the APIs Explorer window.

Open API Explorer
