# Getting started with Dashboard Visualization

Last Updated: 2026-01-13

Complete these steps to monitor your points of interest and assets from around the world from Dashboard Visualization.

## About this task

You can access your dashboards from a web console.

## Procedure

1. Log in to Environmental Intelligence Suite at the following URL: https://environmentalintelligencesuite.ibm.com.
   Use your IBMid to log in.
2. From the side menu, choose **Dashboard visualizations > Summary**.
   You'll see an alert summary of all of your points of interest from around the world.
3. Open a dashboard by using either of these steps:
   - Click a location on the Summary page to open a dashboard.
   - From the side menu, choose **Dashboard visualizations > Dashboard**.
4. From the side menu, choose **Dashboard visualizations > Dashboard**.
   Select a dashboard from the list.
5. Create a custom dashboard. From the dashboard menu, choose **Create new dashboard** to open the dashboard editor.
   a. Select an existing dashboard as a starting point or select `Blank dashboard`.
   b. Set the dashboard location.
      You can enter *one* of the following combinations:
      - City, state
      - City, country
      - Zipcode
      - Latitude and longitude

      You might specify Boston, MA, or Paris, France, or `-33.8698439,151.2082848`.
   c. Assign a name to the dashboard.
   d. Set its time range. Select one of the following options:

      **Active**
      Monitor locations every day of the year. Active dashboards are included in your usage calculation.

      **Inactive**
      No monitoring of locations. Inactive dashboards are excluded from your usage calculation.

**Custom range**

Active during a custom time period. When active, the dashboards are included in your usage calculation.

e. Assign people to the dashboard. Assign read-only access or editing permissions. Choose whether to send email notifications for alerts in addition to giving access to the dashboard.
f. Click **Create**.
g. Add panels to the dashboard. Click **Add panel**.

6. From the side menu, choose **Dashboard visualizations > Interactive map** to monitor your service area from the map.
   Click to apply layers and overlays to the map. For more information about adding layers and overlays, see the Interactive map section of the Dashboard Visualization topic.
