You deserve good air quality.

Monitor up to 5 pollutants and particles simultaneously and get real-time data on the quality of the air you breathe.

Measure the impact of your activities and see if your decisions to ensure good air quality are really effective. Visualise and analyse all data in one place thanks to the Kunak AIR Cloud web platform.

Data quality is guaranteed. All of our sensors are factory calibrated and tested according to the European CEN/TS 17660 and EPA/600/R protocols, metrics and target values for air sensors.

Data traceability to reference standards: European Directive 2024/2881 and USEPA 40 CFR Part 53.

Get accurate data on a wide range of pollutants.

The most versatile solution. The patented smart gas cartridge technology allows you to select different pollutants based on your project's needs and switch them whenever required.

Patented plug&play cartridge system

Up to 16 pollutants. Combine 5

Proven accuracy (EPA, MCERTS, Airlab, CEN/TS 17660)

Traceable back to reference standards

Easy & remote maintenance

Autonomous operation

With Kunak AIR air quality stations, obtain environmental monitoring with **precise, reliable, real-time measurements** of key pollutants, at a lower cost than traditional methods.

Kunak AIR stations offer performance levels close to **reference standards**, providing reliable, accurate data according to CLass 1 of the European CEN/TS 17660; protocols, metrics, and target values of EPA/600/R-20/279 for O_3, EPA/600/R-23/14 for NO_2, CO, and SO_2, EPA/600/R-20/280 for $PM_{2.5}$, and EPA/600/R-23/145 for PM_{10}.

Also, data is traceable to international recognised standards (European Directive 2024/2881 and USEPA 40 CFR Part 53).

Start improving the air quality in your community today.

Get the award-winning solution as **the most accurate multi-pollutant sensor** and start taking effective action to improve air quality. With the Kunak AIR Cloud web platform, you can easily visualise and analyse the data collected by the sensor network and make **better decisions**.

Our solution has been tested by the world's leading **air quality experts**.

The widest range of pollutants

CO NO NO_2 O_3 SO_2 H_2S CO_2 CH_4 VOC NMHC NH_3 HCl
HCN HF Cl_2 – ClO_2 O_2
PM_1 $PM_{2.5}$ PM_4 PM_{10} TSP TPC Ultrafine particles
Temperature Humidity Atmospheric pressure Dew point

You cannot improve what cannot be measured accurately and reliably

Data quality is a key issue since data of poor or unknown quality is less useful than no data since it can lead to wrong decisions. (Snyder et al., 2013)

Benefits

Accurate, real-time pollution data.

Easy & Fast installation

Set up in less than 10′ with visual diagnosis in a built-in display

Cartridges system

Replace and combine cartridges with a plug & play system

Proven accuracy

Designed for type approval & certification

Easy calibration

Adjust the baseline and span remotely

Air quality platform

Visualise, analyse and manage your data in the cloud

Multi pollutant

Measure up to 5 gases and particulate matter at once

Fully autonomous

Autonomous operation with its built-in battery and solar panel

Real-time data

Access to your data and alarms in real-time

Additional probes

Connect wind, rain, noise, and other sensors

Applications

Research & Consultancy

Software

With our advanced air quality software Kunak AIR Cloud, you can easily analyse all the data collected by the Kunak AIR stations and generate reports for decision-making.

In addition, you can configure the deployed devices and have an alarm system that facilitates remote operation and maintenance of the network in an easy way.

Integrate the data collected by the network and stored by the server into public air quality platforms or third-party applications using the powerful API Rest.

If required, the API also allows you to integrate data from external sources to complement the information provided by the monitoring network and analyse all data on a single platform.

Specifications

Dimensions / Weight	200 x 153 x 185 mm I < 2.3 kg
Enclosure	PMMA, polycarbonate and stainless steel
Operating temp. / RH	-40ºC to +60ºC I 0 to 99% RH
IP rating	IP65
Battery	Lithium 20Ah
External supply	7 – 12 Vdc. charger or solar panel
Autonomy	24/7 with charger or solar panel 9-20 days operation on battery (depending on configuration)
Power consumption	0.08-0.55W (depending on configuration)

Communications	Multi-Band 2G/3G/4G, Ethernet and Modbus RTU Slave
GNSS	GPS and GLONASS
Built-in sensors	Temp. I Humidity I Atmospheric pressure I Dew point
Connectors	#1: 7V to 12V power supply or Ethernet #2: Depending on version (selected from): Option 1: Anemometer & Rain Gauge Option 2: Modbus RTU master Option 3: Sound meter Option 4: Modbus RTU slave Option 5: Ethernet #Wifi: Ultrafine particle sensor (UFP)
Avg. periods	From 10 seconds to a maximum of 24 hours
Sending periods	From 5 minutes to a maximum of 24 hours
SIM	Embedded eSIM and extra SIM holder
