IBM Product Documentation for Environmental Intelligence Suite (EIS) - Geospatial Analytics

How To

Summary

Geospatial Analytics, formerly known as IBM PAIRS Geoscope, provides a store of geospatial-temporal data and an analytics engine for conducting complex and fast queries to reveal key relationships between the layers of data.

Steps

The library of data sets includes curated data layers from a range of categories. For example, you might create a query that combines COVID-19 data with pollution for the last two years across the world to gain insight into the correlation between COVID-19 and air quality.

The EIS product documentation for Geospatial Analytics APIs and SDK can be found here *(https://www.ibm.com/docs/en/environmental-intel-suite?topic=applications-geospatial-analytics)*.

When EIS clients are onboarded to Geospatial Analytics (GA) / PAIRS, users will receive an invite email like this example below for them to complete the onboarding process:

IBM **Environmental Intelligence Suite**

Geospatial Analytics API key

Hi,

Thank you for registering for IBM Environmental Intelligence Suite, which includes the Geospatial Analytics API's. This email contains your API credentials and a link to the documentation.

API key

Associated information included in the initial invite email:

- GA API key
- GA/PAIRS API Documentation
    1. API / swagger documentation:
    2. API tutorials: https://pairs.res.ibm.com/tutorial/tutorials/api/index.html

This API key is used to retrieve an API access token. See the following links for information on Geospatial Analytics API access tokens and authentication.

- Geospatial Analytics API Access Token:
- Geospatial Analytics API Authentication:

If you need additional information, have any further questions or concerns open a case; include your details with our EIS support team via the IBM Support portal *(https://www.ibm.com/mysupport/s/)*. Our team will be happy to assist you.
