Forecast APIs

Last Updated: 2026-01-13

Use the Forecast APIs to get weather data related to forecasted conditions, such as visualizations, time-based forecasts, precipitation, hobby-related indices, and forecast data for analytical tooling.

- **Gridded and Polygonal Seasonal and SubSeasonal Forecast**
  The 'Tiler', and 'Featurizer' products support data visualization and analytics.
- **Daily Forecast (3 Day, 5 Day, 7 Day, 10, 15 Day)**
  The Daily Forecast API is sourced from the The Weather Company Forecast system. This TWC API returns weather forecasts starting on the current day. Your content licensing agreement with TWC determines the number of days returned in the API response and is constrained by the API Key that i provided to your company. Please refer to the Data Elements section later in this document for more details.
- **Hourly Forecast - Enterprise**
  The Hourly Forecast API provides hourly forecasts for up to 15 days.
- **Intraday Forecast (3 Day, 5 Day, 7 Day, 10 Day)**
  The Intraday Forecast API is sourced from the The Weather Company Forecast system. This TWC API returns weather forecasts in 6-hour periods starting current day. The 6-hour periods are Morning, Afternoon, Evening, and Overnight. Your content licensing agreement with TWC determines the number of days returned in the API response and is constrained by the API Key that is provided to yo company.
- **2 Day Hourly Forecast (48 hour)**
  The 2 Day Hourly Forecast API provides forecasts for 48 hours.
- **Forecast - Intraday 15 Day**
  The Intraday Forecast API is sourced from the The Weather Company Forecast system. This TWC API returns weather forecasts in 6-hour periods starting current day. The 6-hour periods are Morning, Afternoon, Evening, and Overnight. Your content licensing agreement with TWC determines the number of days returned in the API response and is constrained by the API Key that is provided to yo company.
- **Short Range Forecast 15 Minute**
  The 15 Minute Forecast API is a restricted API sourced from the The Weather Company Forecast system. This TWC API returns short-range forecasts in 15 minute intervals over the course of the nex 7 hours.
- **Short Range Forecast Nowcast**
  The short range Nowcast Forecast API is sourced from the TWC Forecast system. This API provides a text summary of the weather forecast for the next 6 hour period for today. Please refer to the Data Elements section later in this document for more details.
- **Short Range Forecast Precipitation Forecast**
  The Precipitation Events Forecast API provides a weather forecast for precipitation events(rain, snow sleet, freezing rain) onset and offset times for 28 time steps over the next 7 hours.

- **When Will It Rain**
  The When Will It Rain Forecast API provides a weather forecast over the next 6 hours based upon da from the Precipitation Events forecast. The Precipitation Events Forecast API provides a weather forecast for precipitation events (rain, snow, sleet, freezing rain) onset and offset times for 28 time steps over the next 7 hours.
- **Aches and Pains Index**
  The Aches and Pains index indicates the weather's influence on an individual's potential to feel aches and pains.
- **Breathing Asthma Index**
  The Breathing index indicates weather's influence on the ability to breath for respiratory-sensitive individuals including those who suffer from asthma.
- **Driving Difficulty Index - Daypart - 15 Day**
  The Forecast Indices API is sourced from the TWC Forecast system. The Driving Difficulty index provides indices of driving difficulty, or road weather conditions.
- **Driving Difficulty Index - Hourly - 15 Day**
  The Forecast Indices API is sourced from the TWC Forecast system. The Driving Difficulty index provides indices of driving difficulty, or road weather conditions.
- **Dry Skin Index**
  The Dry Skin index provides indices indicating likelihood that a person will experience dry skin based on weather conditions.
- **Frizz Index**
  The Frizz Index provides indices indicating likelihood that a person will experience frizzy hair based c weather conditions.
- **Golf Index - Daypart - 15 Day**
  The Golf Index provides an index of golfing weather conditions.
- **Golf Index - Hourly - 15 Day**
  The Golf Index provides an index of golfing weather conditions.
- **Heating and Cooling Index-v2.0**
  The Heating and Cooling index provides indices describing the amount of heating/cooling that is required to maintain a comfortable indoor temperature, based on weather conditions.
- **Leisure Travel Index - Daypart - 15 Day**
  The Leisure Travel index provides indices of outdoor travel / sightseeing conditions due to weather.
- **Leisure Travel Index - Hourly - 15 Day**
  The Leisure Travel index provides indices of outdoor travel / sightseeing conditions due to weather.
- **Mosquito Activity Index**
  The Mosquito index indicates the weather's influence on the activity of mosquitoes based on weathe conditions.
- **Pollen Index**
  The Pollen index provides forecast indices for Grass, Ragweed, and Tree pollen.
- **Power Disruption Index**
  The Power® Disruption index provides indices indicating the potential for power disruptions due to weather.
- **Running Weather Index - Daypart - 15 Day**
  The Running Weather Index provides indices of outdoor running conditions due to weather - for shor

and long runs.

- **Running Weather Index - Hourly - 15 Day**
  The Running Weather Index provides indices of outdoor running conditions due to weather - for short and long runs.
- **Ski Index**
  The Ski Index provides indices of ski conditions due to weather.
- **Standard US Tidal Predictions**
  The U.S. Tides API returns marine tide predictions for coastal locations in the United States and its territories. The tidal predictions are generated from harmonic or subordinate tide station/locations. Harmonic locations (also known as reference sites) are generated by regular water level reading sites Subordinate location predictions derived by applying corrections to a reference tide station. Data is available for the date range of 12 months prior to present date and up to 12 months into the future. Data will not be returned for locations over 60 miles from the coastline.
- **Static Electricity Index**
  The Static Electricity Index provides indices indicating the potential for static electricity based on weather conditions.
- **UV Index**
- **Watering Needs Index**
  The Watering Needs index indicates the weather's influence on the need to water your lawn or garde
- **Tropical Forecast Cone**
  The Tropical Forecast - Cone API renders a cone representing the projected path of a tropical storm and current position information, based on 5 days of forecast advisory. For this API, JSON returned w always be GeoJSON.
- **Tropical Forecast Projected Path**
  The Tropical Forecast - Projected Path API provides the ability query the single projected path per active storm. Active storm - any storm that has reported in the last 168 hours.
- **15 Day Agriculture - Hourly Forecast**
  The TWC Agriculture APIs provide a variety of business-ready forecast content for the agriculture markets, by generating it on-the-fly using proprietary wxmix technology from The Weather Company An IBM® Business (TWC). Agriculture product includes reference and modeled evapotranspiration. Tl hourly forecast starts at top of current hour and extends through the entire length of available foreca output (currently 15 days, including the current day).
- **Agriculture Croptype Lookup**
  The TWC Agriculture APIs provide a variety of business-ready forecast content for the agriculture markets, by generating it on-the-fly using proprietary wxmix technology from The Weather Company An IBM Business (TWC). Agriculture product includes reference and modeled evapotranspiration. Th hourly forecast starts at top of current hour and extends through the entire length of available foreca output (currently 15 days, including the current day).
- **Degree Days Index**
  The Degree Days index provides the indices for cooling degree days, growing degree days, and heatin degree days.
- **Frost Potential Index**
  The Frost Potential Index provides an indices indicating likelihood of Frost.

- **15-Day Solar Energy - Hourly Forecast**
  The TWC Renewable Energy APIs provide a variety of business-ready forecast content for the energy markets, by generating it on-the-fly using proprietary wxmix technology from The Weather Company An IBM Business (TWC). Solar energy product including an hourly irradiance forecast starting at top c current hour and extends through the entire length of available forecast output (currently 15 days, including the current day).
- **15-Day Wind Energy - Hourly Forecast**
  The TWC Renewable Energy APIs provide a variety of business-ready forecast content for the energy markets, by generating it on-the-fly using proprietary wxmix technology from The Weather Company An IBM Business (TWC). Wind energy product including air density, wind speed, and direction at a requested height AGL. Hourly forecast starts at top of current hour and extends through the entire length of available forecast output (currently 15 days, including the current day).
- **7-Day Solar Energy 15-Minute Forecast**
  The TWC Renewable Energy APIs provide a variety of business-ready forecast content for the energy markets, by generating it on-the-fly using proprietary wxmix technology from The Weather Company An IBM Business (TWC). The 15 minute version of the solar energy product includes a 15 minute irradiance forecast starting at the beginning of the current 15 minute period and extending 7 days, including the current day.
- **Probabilistic Hourly Forecast**
  The Probabilistic Forecast API provides a variety of statistical forecast content by generating it on-the fly using proprietary technology from The Weather Company An IBM Business (TWC). This API provides a discretized PDF, and/or probability integrations over specified parameter value ranges, generalized percentile value extractions, and/or prototypes for supported physical quantities, and limited functional expressions. Hourly forecast data starts at the beginning of the current hour, at tim of call, and can extend from 24 to 360 hours with a default of 240 hours. Hourly temperature distributions are further enhanced using a BMA calibration method. Calibration is not available for min(), max(), or sum() aggregations of hourly temperatures or other parameters.
- **Forecast Data for Analytical Tooling**
  The Forecast Data for Analytical Tooling API provides aggregated forecast data for use by Data Scien teams in performing Predictive Analytics.
